Digital Literacy Project Report

Title Page

Name: Kshitij Das
Registration Number: 25BAI10398
Branch: B.Tech CSE AI or ML
Batch: 2025
University: VIT Bhopal University
Course Code: CSE0001 – Digital Literacy
Date: 30 March 2026

Introduction

In today's digital world, having strong digital literacy skills is essential for every student. This project helped me understand how digital tools, online communication, and cybersecurity awareness play an important role in both academic and professional life. Through the five tasks included in this project, I explored various platforms such as GitHub, LinkedIn, Kaggle, and Codechef while also learning about professional email etiquette and online safety. This project not only improved my technical knowledge but also helped me build a professional digital presence that will be useful throughout my academic journey and future career.

Task 1 – Digital Literacy Awareness Infographic

For this task, I created a one-page infographic using Canva. The infographic focused on three important aspects of digital literacy: understanding digital tools, maintaining a professional online presence, and following safe internet practices. I designed the infographic in a simple and visually appealing way so that it could be easily understood by students. The most interesting part of this task was arranging the information in a clean and creative layout. It helped me understand how visual presentation can make information more engaging and effective.

Task 2 – Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. GitHub will help me showcase my coding projects and academic work, LinkedIn will help me build a professional network, and Kaggle will be useful for learning data science and machine learning in the future. This task made me realize the importance of building a professional online identity from the first year itself. Over the

next four years, I plan to keep updating these profiles with my projects, achievements, certifications, and internships.

Task 3 – Coding & Collaboration Platforms

For the coding practice section, I used Codechef and completed a beginner-level challenge. This helped me improve my problem-solving skills and become familiar with coding assessment platforms. For the collaboration section, I created a Google Form consisting of five questions on digital literacy awareness and linked it to a Google Sheet for responses. This task was very useful because it introduced me to platforms that can support both coding practice and academic collaboration.

Task 4 – Professional Email & Etiquette

This task helped me understand the importance of professional communication in academic and workplace settings. I drafted two formal emails: one requesting an assignment deadline extension and another expressing interest in an internship opportunity. I also created a social media do’s and don’ts checklist to promote responsible online behavior among students. Through this task, I learned that clear subject lines, respectful tone, and proper sign-offs are essential in professional emails.

Task 5 – Cybercrime Awareness

For this task, I worked on a case study related to phishing and online fraud. I explored how cybercriminals target students through fake emails, messages, and payment links. I also prepared a prevention checklist that included actionable tips such as avoiding suspicious links, enabling two-factor authentication, and verifying UPI transactions carefully. Researching this topic made me more aware of online risks and encouraged me to adopt safer digital habits in my daily life.

Conclusion

Overall, this project was a valuable learning experience that enhanced my digital literacy skills. It helped me understand the practical importance of digital tools, professional communication, and cybersecurity awareness. The knowledge and skills gained through this project will continue to support me throughout my academic and professional journey.
